NEW PARAGRAPH

Referring now to **FIG. 3a**, the end view of cutter body **13** shows where a cross section IIIb-IIIb of **Fig. 3b** is taken. Referring now to **FIG. 3b**, cutting members **14** exhibit a helix angle **23** that correspond to the helix angle **22** of helical flute **15** on tap **12**. The equality or near equality of the helix angles **22** and **23** is necessary to permit free slidability of cutter body **13** as it rides up and down, rotating on tap **12**.

NEW PARAGRAPH

Referring now to **FIG.4**, an inside surface **24** of each cutting member **14** supports flute following edges **25** and **26**. The size of surface **24** and the distance between following edges **25** and **26**, plus matching helix angle **23** of cutting member **14** with the helix angle **22** of tap flute **15**, is critical to slidable operability of cutting body **13** on tap **12**.
